

Enr. No. : 2302030430073

Assignment : 1

[Ans 1 :]

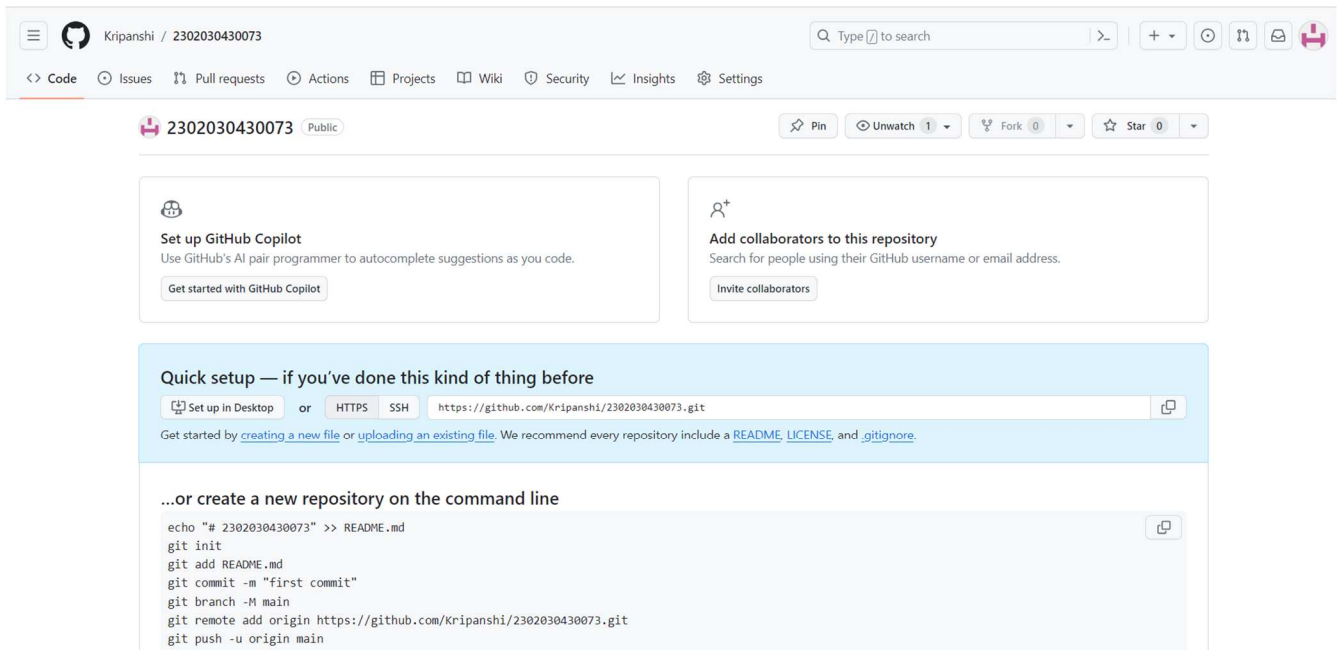

Step 1: click on the “New” button to create a new repository.

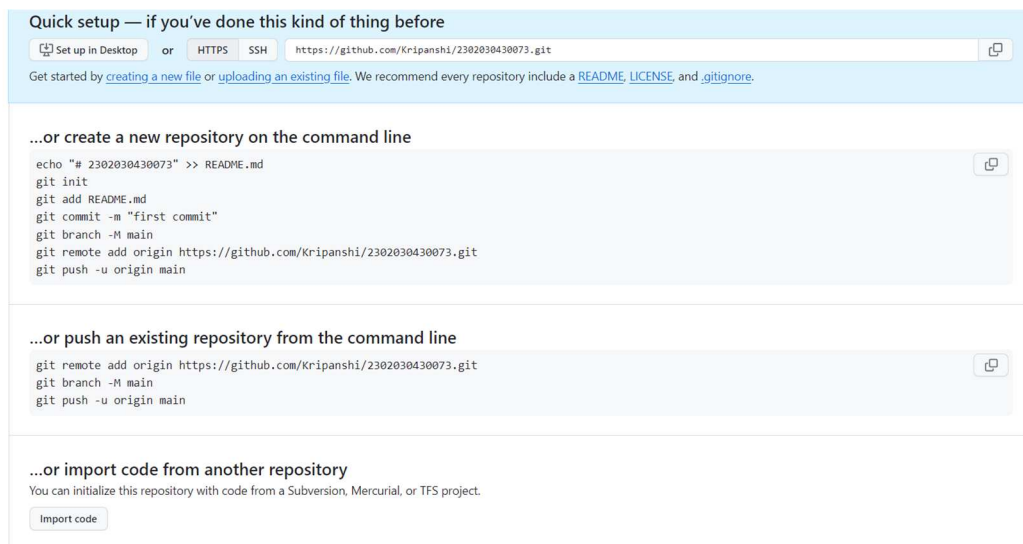

Step 2 : Give the name of the repository. Make it public or private by clicking on the given options. Add a README file if you want to. After that click on the “Create repository” button.

The screenshot shows the 'Create a new repository' form. At the top, there's a header with the GitHub logo and 'New repository' text. Below this, there's a search bar and several icons. The main content area is titled 'Create a new repository' and includes a description of a repository. There's a link to 'Import a repository'. Below this, there's a section for 'Required fields are marked with an asterisk (*)'. The 'Owner' field is set to 'Kripanshi' and the 'Repository name' field is '2302030430073'. A green checkmark indicates that the name is available. There's a section for 'Description (optional)' with a text input field. Below this, there are two radio button options: 'Public' (selected) and 'Private'. The 'Public' option has a description: 'Anyone on the internet can see this repository. You choose who can commit.' The 'Private' option has a description: 'You choose who can see and commit to this repository.' There's a section for 'Initialize this repository with:' with a checkbox for 'Add a README file' and a link to 'Learn more about READMEs'. Below this, there's a section for 'Add .gitignore' with a dropdown menu set to 'None' and a link to 'Learn more about ignoring files'.

Like that, your GitHub repository has been created successfully.

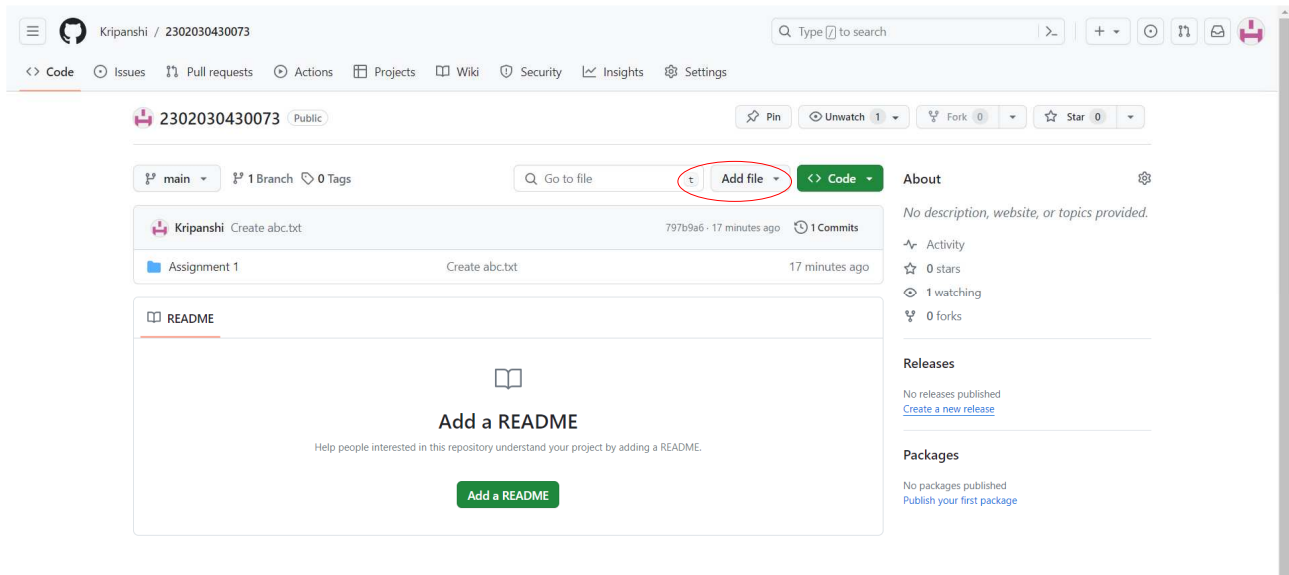

Step 3 : Scroll down and you will see the option for importing code.

ProTip! Use the URL for this page when adding GitHub as a remote.

Click on “uploading an existing file” and you can start importing the code files and folders to your REPO or follow the commands and execute them.

You can Click on “Add files” then you can add or make folders and files in your REPO.
